September 30, 2022

Dear Potential Donor,

Thank you for taking your valuable time to read this letter. We are a competition robotics team based in Franklin New Hampshire. We are a high school age team affiliated with FIRST Robotics. We are contacting your company regarding donations or sponsorship of our team. We would be incredibly grateful should you choose to do so, but if you are not currently in a position to, we understand.

FIRST Robotics is "a sport of the mind" -- students work together to design and build industrial sized robots under the guidance of experienced mentors. Just like a regular sports team, robotics has a season, competitions, and awards. Each team is given six weeks to design and build a robot that is used to compete in the upcoming events. Past competitions have involved engineering robots that shoot Frisbees, maneuver obstacles, stack totes, throw balls into a goal, and even pick up and drop off milk crates. This is as close to real world engineering a high school student can get, and demands much dedication and hard work to make happen. As part of this program, students also learn to build business plans, budget, and fundraise independently from the district. They are strongly supported by the school community, but not in a financial manner. They must do this on their own.

Below are two levels of support we have available:

1. A **donation** is a monetary gift of any amount or a donation of products or services. We are desperately seeking mentors who can share their building and mechanical skills with our students. Although money is great - food, equipment, or merchandise we could raffle off as fundraisers or keep to defray team expenses helps more than you could imagine. Support of any kind is valuable.
2. **Corporate sponsorships** start at \$500 and while these financial donations help bring us to our budgetary goals of \$30,000 a year, it will also directly benefit your company through advertising your corporate logos.

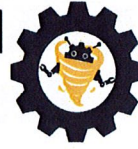

Donors are asked to provide an image to our team which will be displayed in their team competition space on banners, on the competition robot itself, and social media. Keep in mind that First Robotics competitions are viewed in World Wide venues.

Thank you for taking the time to consider donating to our student-run team. With your help, our team can further their endeavors. First is teaching our children skills they can use for the rest of their lives that will impact their ability to give back to society in a meaningful way.

Thank you for your kind generosity, time, and support,

Pierre Guillotte, Student Captain & Matt Nason, Student Co-Captain
