Trestle Bridge Presentation – October 11, 2022

Introduction

- Seth Creighton, AICP Planning & Zoning Director City Project Manager
- Brian Colburn, PE MJ Project Manager
- Ron Joy, PE MJ Structural Engineer
- Chris Gagne MJ Structural Engineer

Agenda

- Project Description
- Summary of Inspection Findings
- Review of Conceptual Alternatives
- Cost Estimates
- Public Feedback / Questions
- Discussion on Next Steps

Project Description

- Construct a Pedestrian Connection Between Winnipesaukee River Trail and Mill City Park
- Awarded a Grant from NHDOT in 2019
 - NHDOT Funding \$512,000
 - City Funding \$128,000
 - Total Funding \$640,000
 - (Assumed Replacing Railroad Ties with Solid Timber Deck)
 - Project Must Follow Prescribed Design Process

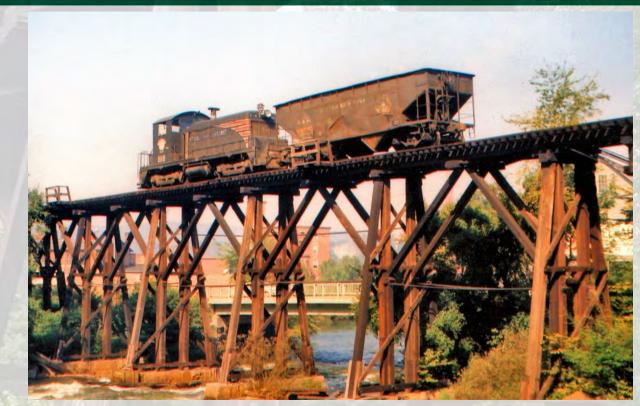

Design Process

- Engineering Study
 - Bridge Inspection
 - Develop Alternatives
 - Public Input
 - Select Locally Preferred Alternative
- Preliminary Design
- Final Design
- Construction

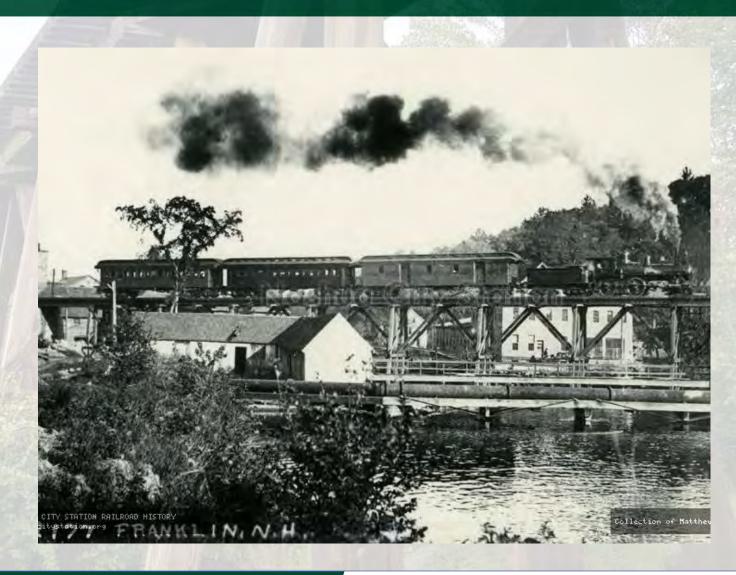

September 1967

History of Franklin Tilton Railroad

- 5-mile Franklin-Tilton RR Spur Between Winnipesaukee Rail Division and B&M Northern Line
- 1889 Franklin-Tilton RR Charter
- 1891 First Sulphite RR Bridge
- 1895 B&M RR Leases Railroad Line
- 1896 Present Sulphite RR Bridge
- Trestle Bridge Built
- 1890s International Paper Buys Mill
- 1920s Paper Mill Closes
- 1936 Rail Service Stopped
- 1940 Request to ICC to Abandon
- 1973 Line Decommissioned

Description of Bridge

- 15-Spans, 356' long, 12' wide, 20' above ground
- 3 types of trestle spans
 - 1. Standard (Spans 1-6 & 15)
 - 2. A-Frame (Spans 8-13)
 - 3. Inverted King Post (Spans 7 & 14)

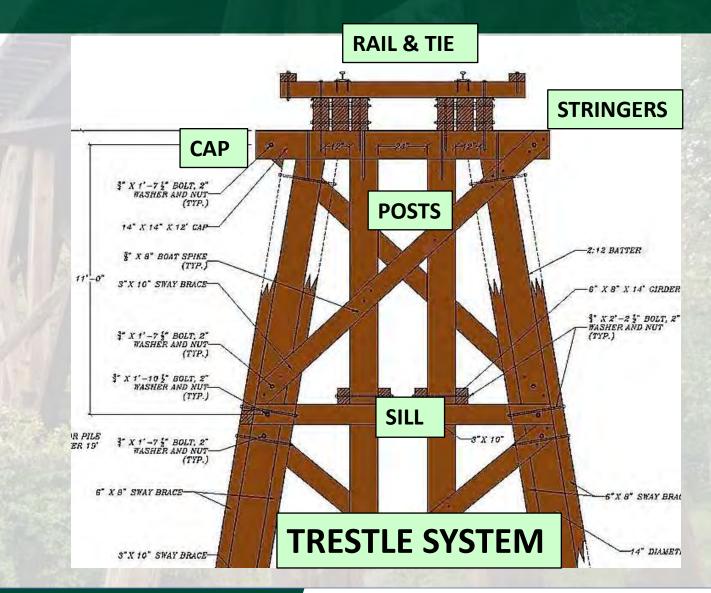

1. Standard Span

- Standard for Branch Lines
 - Height under 12 feet
 - Height between 12-19 feet
 - Height over 19 feet
- Maximum 14 foot span
- Consists of series of nearly identical vertical supports holding up a succession of short spans.
- Direct load path from top of rail to foundation

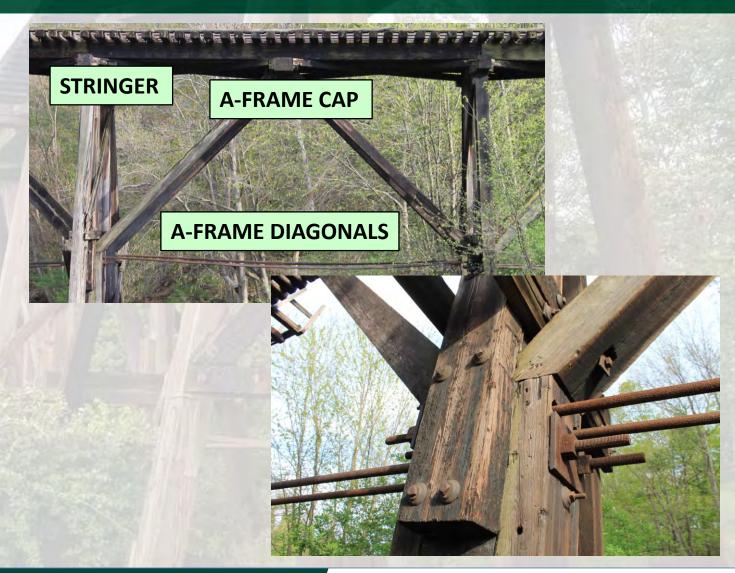

2. A-Frame Span

- For span lengths greater than standard trestle span, A-frames effectively provide additional stringer support.
- Additional longitudinal bracing of adjacent spans are required to aid the bridge in resisting horizontal forces acting through the frame members.

3. Inverted King Post Span

- Inverted King Post provides additional stringer support.
- Incorporate a short section of a standard timber bent (with a cap and sill).
- Stringers function as truss
 members with combined axial
 compression (truss action) and
 flexural (floor system bending)
 stresses.
- Most distinguishable element on the bridge.

Resistance Microdrilling for Timber Inspection

- Highly calibrated drill used to identify timber condition
- Measures forward pressure and torsional resistance needed to advance a 1/16" diameter drill bit into material
- Plots Resistances vs. Depth in real time on built in display
- DOES NOT measure strength of wood only verifies condition relative to resistances throughout cross-section

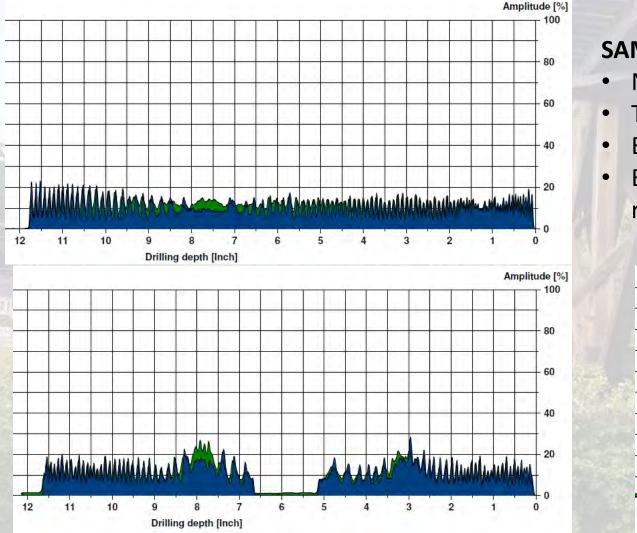

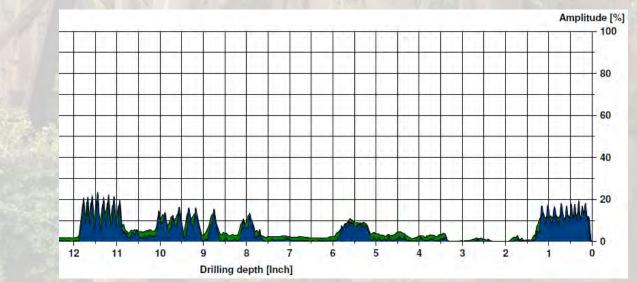

Resistance Microdrilling for Timber Inspection

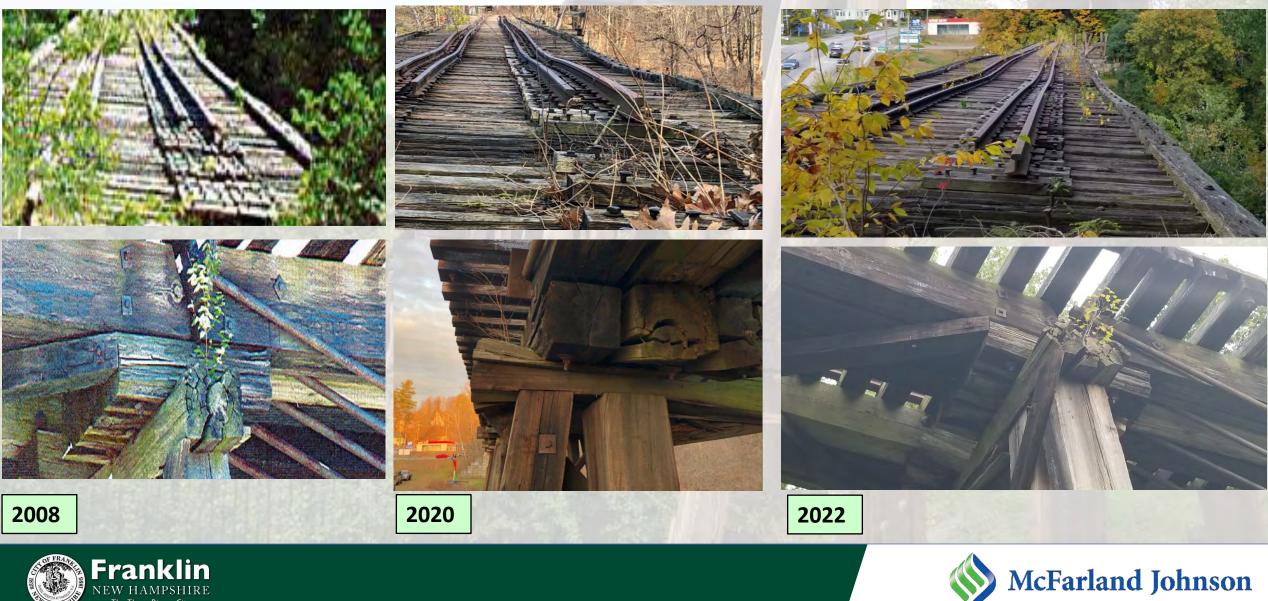

SAMPLE DRILL RESULTS

- Note the drilled dimension is 11.75" in all members
- Top Left Quality wood, no obvious signs of defects
- Bottom Left Majority is OK, but middle 1.5" is rotted
- Bottom Right The exterior 1" on each side is ok, but rest of section is deteriorated

Track View

Condition Summary Table - Bents

	Сар	Post 1	Post 2	Post 3	Post 4	Comments		
Bent 1		DB, SD	DB, DM	DM	RE, SD, DB (6')			Timber Defects
Bent 2	RE	RE, DB	RE, DM	DM	RE, DB	All columns have discrete rot, but generally okay.	CR	Crushed
Bent 3	RE, HO	RE, DM, HO	RE, DT, HO	RE, DT, HO	RE, DB	Top half of C4 may be able to be salvaged.	ST Split	
Bent 4	CR	RE		RE, DB	RE, DB		DB(feet)	Deteriorated Bottom (feet)
Bent 5	RE, ST	DB	RE, DT	DB	RE, ST		DM (feet)	Deteriorated Mid-Height (feet)
Bent 6		RE	RE, DB, DT				DT(feet)	Deteriorated Top (feet)
Bent 7	R	RE, DT, DB	RE, DT, SD	RE, DB, DM	ST, SD, DB, DT	Pipe rolled onto/resting on C4.	но	Hollow
River Bent 8	R, CR	RE, DB (6')	RE, R, SD	DB	RE, DB (5')		R	Rot
River Bent 9	CR	DT, DM	R, SD	DB, SD	DB, SD	Could not access bottom. Visual rot at base of all 4 colmuns - severity unknown.	RE	Repaired (Previously)
River Bent 10	ST	DM, HO	DB	RE, DM	DM, SD	Could not access bottom. Cap showing signs of shear distress.	SD	Surface Deterioration
River Bent 11	ST, SD	RE, ST	DB (3'), DT	RE, DB, HO, SD	RE	Cap rotting at ends, solid under bearing area.		Retain Member
River Bent 12	RE	RE, ST, DB (3')	RE, DB, DM, HO, SD	RE, DM, SD	RE, SD	Visual inspection only at bent cap (top).		Replace Member
Bent 13	CR	RE, HO, DT (6')	RE, HO, DT (6')	RE, HO, DT (6')	RE, HO, DT (3')	Bolsters are crushed.		Repair Member Option
Bent 14	CR	RE, DB	RE, DB	RE, DB, SD	RE, DB	Bolsters are crushed. C2 and C3 are doubled/twin columns (each).		

Condition Summary Table - Stringers

Z	Stringer 1	Stringer 2	Stringer 3	Stringer 4	Stringer 5	Stringer 6
Span 1	DT					HO
Span 2	НО	HO, R		ST		
Span 3	DT, ST			DT, R		
Span 4	HO, R	R		DT		DT
Span 5		DT	DT	DT	DT	DT
Span 6	R	DT, R	DT, R	DT, R	DT, R	DT, R
Span 7	R @ B7		R @ B7			
Span 8	R@B7	R @ B7				
Span 9		R			DT, HO, R	DT, HO, R
Span 10	i				R	
Span 11	7				R	
Span 12		R			DT, R	R
Span 13			R	R	R	
Span 14	1	R			R	
Span 15						

	Timber Defects				
CR	Crushed				
ST	Split				
DB(feet)	Deteriorated Bottom (feet)				
DT(feet)	Deteriorated Top (feet)				
R	Rot				
НО	Hollow	1			
RE	Repaired (Previously)				
SD	Surface Deterioration				
FL	Full Length				
	Retain Member				
	Replace Member				
	Repair Member				

*Note that surface deterioration is typical for tops of all stringers in all spans

**Note that this table is based on hands on inspection from under the structure. Top side inspection was partially visual due to restricted access.

Franklin NEW HAMPSHIRE The Three Rivers City

Condition Summary Table – A-Frames & Truss

	A France Con	(A-Frame	Diagonals	2	Vine Deal

BENT 13

BENT 13

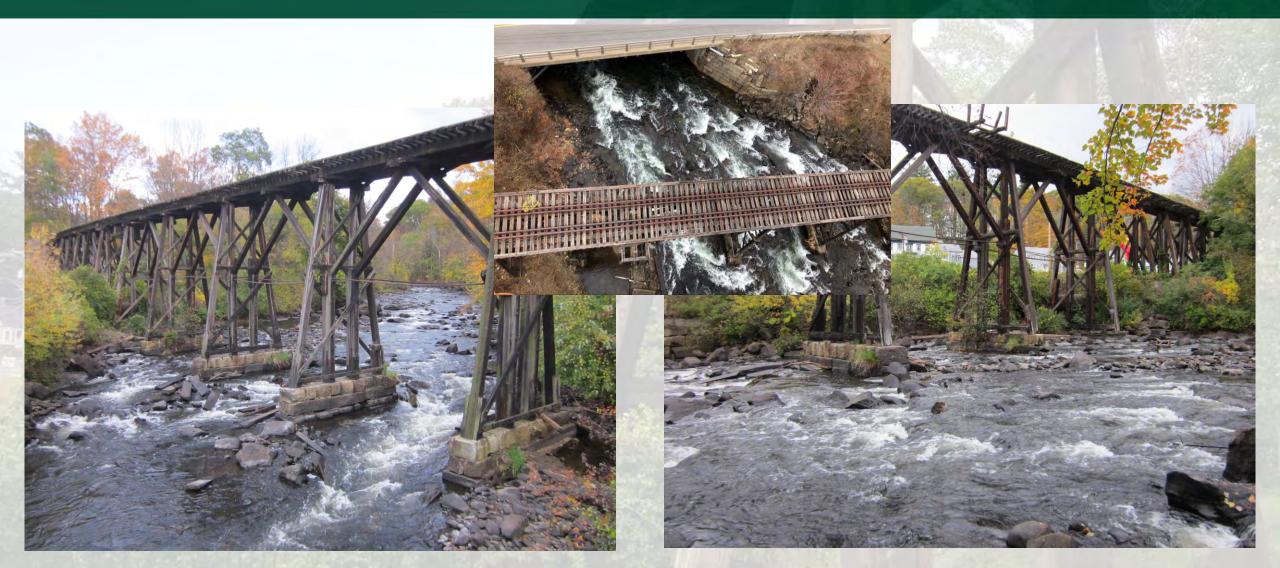

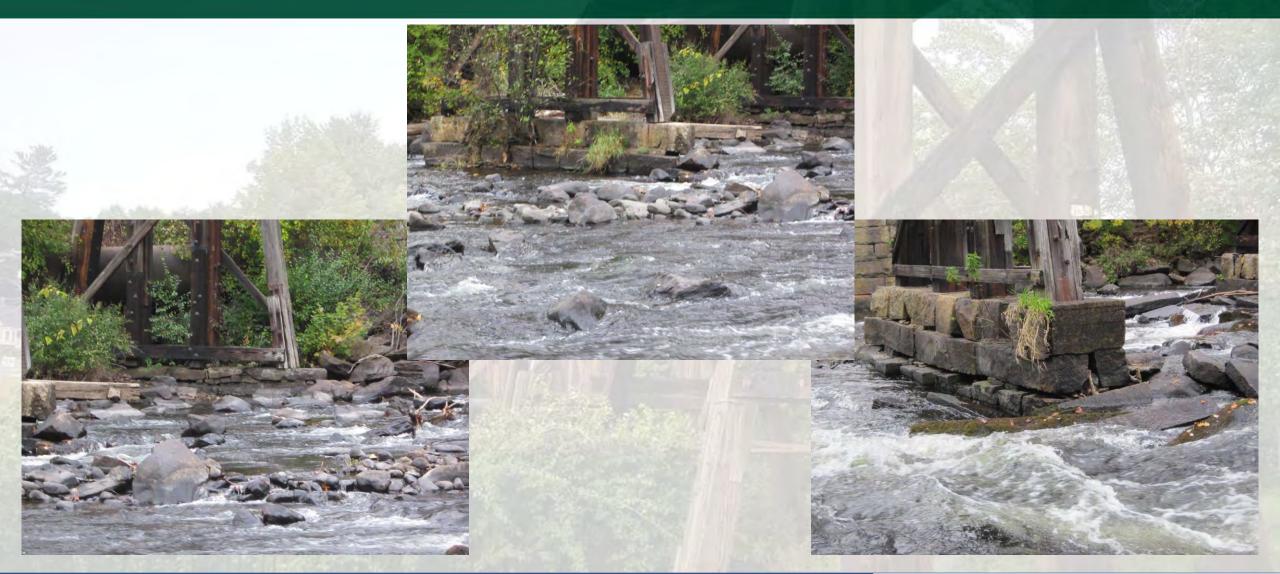

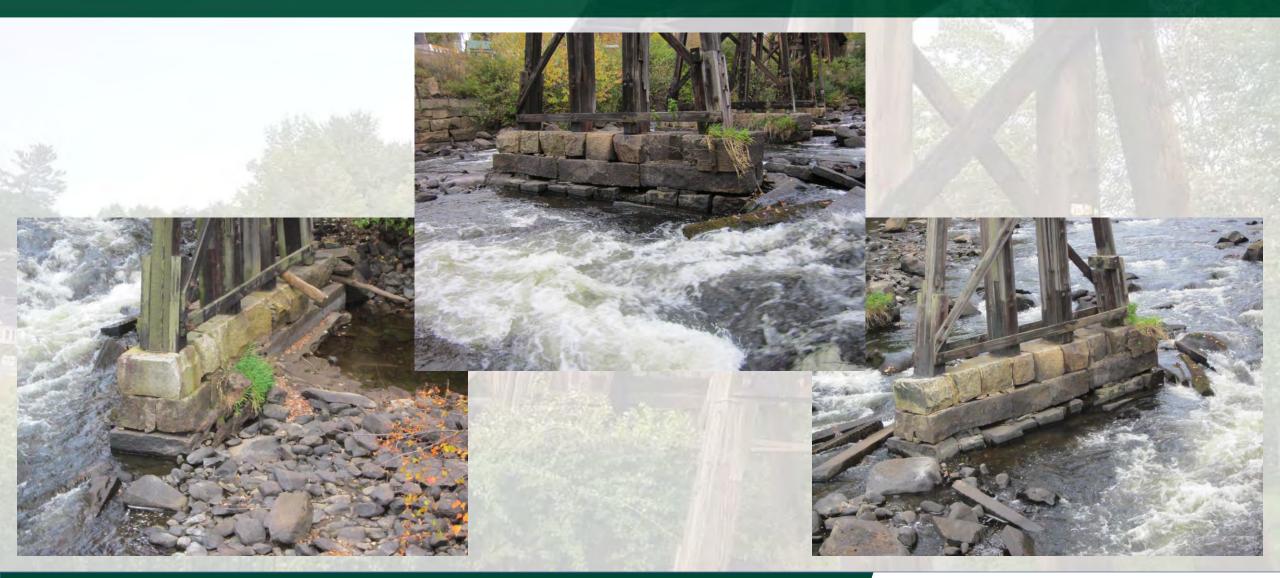

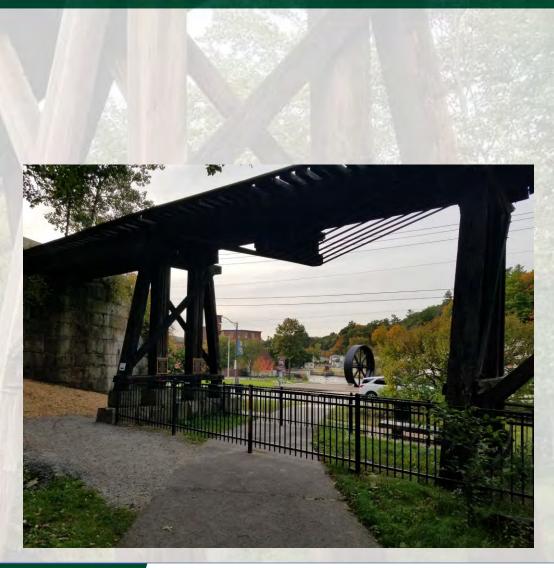

Structural Inspection Findings

- Portions of the Truss are in Poor Condition
- Truss is Continuing to Deteriorate
- 2019 Inspection Led to Path Relocation

Current Alternatives

- Rehabilitate Existing Railroad Trestle
 - Remove Rail, Ties, & Stringer and Put on New Deck & Historic Style Railing
 - Rehabilitate and Replace Trestle Members
 - **New Railroad Trestle**
 - Replicate Existing Design
 - All New Timber Members
- New Pedestrian Bridge Upstream

New Railroad Trestle Alternatives

- Modern Materials Could Be Used to Build a More Efficient Trestle
 - Fewer Bents
 - Longer Spans
 - Would Change the Look of the Trestle
 - Would Lower Construction Costs
 - Require Additional Coordination with Resource Agencies
 - Wide Range of Options

Questions

Next Steps

- Select Locally Preferred Alternative
- Review with NHDOT
- Identify Additional Funding Sources
- Continue with Design Development
